SHORTENED STATUTORY PERIOD OF RESPONSE	MAIL DATE	DELIVERY MODE
3 MONTHS	01/17/2007	PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

If NO period for reply is specified above, the maximum statutory period will apply and will expire 6 MONTHS from the mailing date of this communication.

Office Action Summary	Application No. 09/872,589	Applicant(s) SUBRAMANIAN ET AL.	
	Examiner Kyle R. Stork	Art Unit 2178	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 01 December 2006.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-91 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-91 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. This final office action is in response to the remarks filed 1 December 2006.
2. Claims 1-91 are pending. Claims 1, 23, 49, 58, 63, 70, and 71 are independent claims.

Oath/Declaration

3. The declaration filed on 7 December 2005 under 37 CFR 1.131 has been considered, but is ineffective to overcome Copeland et al. (US 2002/0147887, filed 18 December 2000) reference.
4. The evidence submitted is insufficient to establish a reduction to practice of the invention in this country or a NAFTA or WTO member country prior to the effective date of the Copeland reference.

The applicant relies upon Exhibit A as evidence that the applicant reduced the invention to practice. The applicant fails to specify which Exhibit is Exhibit A.

Further, the applicant attempts to disclose the location of each limitation from the independent claims within exhibit A (paragraphs 5-9). However, exhibit A fails to disclose both, "wherein the prefabrication is not in response to a request for the first page by a user," and "querying a database" as claimed. The applicant has also neither established invention of the dependent claims prior to December 18, 2000 nor made a statement relating to the limitations of the dependent claims.

Finally, the applicant states that exhibit B is relied upon to show that the, "invention was reduced to practice and tested to verify that it worked for its intended

purpose prior to December 18, 2000 (paragraph 10).” However, this is merely a vague and general statement that fails to specifically disclose what exhibit B is relied upon to show.

Although the applicant submitted Remarks, filed 1 December 2006, attempt to address deficiencies with the affidavit, MPEP 715.07 state:

The affidavit or declaration and exhibits must clearly explain which facts or data applicant is relying on to show completion of his or her invention prior to the particular date.

Therefore, the remarks are moot. However, if placed into a Declaration under 37 CFT 1.131, similar remarks may clarify the issue.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 1-3, 7-8, 10-11, 13-15, 21-27, 30-32, 34-35, 37-57, 63, 65, 67-68, 70-72, 75, 77-78, 80-89, and 91 remain rejected under 35 U.S.C. 103(a) as being unpatentable over Heddaya in further view of Smith and Copeland et al. (US 2002/0147887, filed 18 December 2000, published 10 October 2002, hereafter Copeland).

As per independent claim 1 Heddaya discloses a method for prefabricating an information page, comprising:

- Prefabricating a first page in accordance with a definable prefabrication policy to produce a first prefabrication page (column 7, lines 10-11)
- Receiving an information request (column 7, lines 18-24)
- Determining if the information request corresponds to the first page (column 7, lines 24-27)
- Dynamically fabricating a second page if the information request corresponds to the second page (column 7, lines 42-45)

Heddaya fails to disclose the method wherein the prefabrication is not in response to a request for the first page by a user. However, Smith discloses the method of prefabrication of a page wherein the prefabrication is not in response to a request for the first page by a user (Figures 3 and 4; column 5, line 56- column 6, line 18: Here, the pages to prefabricate are based upon pages that a user frequently visits. A page prefabrication is then scheduled for a specific time and the page is prefabricated without a user requesting the prefabricated page).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya's method of prefabrication with Smith's method of prefabrication, since it would have allowed a user to save server access time, conserve cache space, and reduce the risk of conflicting with the user's use of the telephone (Smith: column 5, lines 60-62).

Further, Heddaya and Smith fail to specifically disclose the method wherein the act of prefabrication the page comprises querying a database to obtain cached data, processing the data received from the database, and packaging the information

associated with the data in a prescribed format. However, Copeland discloses the method wherein the act of prefabrication the page comprises querying a database to obtain cached data, processing the data received from the database, and packaging the information associated with the data in a prescribed format (paragraphs 0038-0041). Here, the cached data, stored in a database is retrieved. The data is then processed and packaged into a prescribed format, here the format is HTML).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya and Smith's method with Copeland's method, since it would have allowed a user to more quickly access data (Copeland: paragraph 0041).

As per dependent claim 2 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 1 and the same rejection is incorporated herein. Heddaya further discloses a method:

- Determining if the first prefabrication page is stale (column 3, lines 49-51)
- Dynamically fabricating the first page if the first prefabricated page is stale (column 3, lines 57-59)

As per dependent claim 3 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 3 and the same rejection is incorporated herein. Heddaya further discloses a method where a time factor is considered in determining whether the first prefabricated page is stale (column 3, lines 60-62).

As per dependent claim 7 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 1 and the same rejection is incorporated herein.

Art Unit: 2178

Heddaya further discloses the method where a system resource level is considered before schedule the action of page prefabrication (column 8, lines 5-13; column 8, lines 20-28).

As per dependent claim 8 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 7 and the same rejection is incorporated herein. Heddaya further discloses the method in which the system resource level is a resource measure selected from the group consisting of: CPU usage level, memory usage level, and number of pending prefabrication requests (column 8, lines 20-49).

As per dependent claim 10 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 1 and the same rejection is incorporated herein. Heddaya further discloses the method in which the definable prefabrication policy identifies pages to prefabricate (column 3, lines 52-64).

As per dependent claim 11 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 10 and the same rejection is incorporated herein. Heddaya further discloses the method in which the definable prefabrication policy comprises a responsibility parameter (column 8, lines 34-49).

As per dependent claim 13 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 10 and the same rejection is incorporated herein. Heddaya further discloses the method in which the definable prefabrication policy comprises a scheduling parameter (column 3, lines 60-62). Here, the update of material can be either "periodically or at a scheduled update time." Both of these options disclose definable prefabrication policy.

As per dependent claim 14 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 10 and the same rejection is incorporated herein. Heddaya further discloses the method in which the definable prefabrication policy comprises a refresh rate parameter (column 3, lines 60-62). In this instance, the updated material can be refreshed at a "scheduled update time" which is a refresh rate parameter.

As per dependent claim 15 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 1 and the same rejection is incorporated herein. Heddaya further discloses the method in which auto-tuning of the prefabrication step is performed to minimize interference with other system workload (column 4, lines 22-43).

As per dependent claim 21 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 1 and the same rejection is incorporated herein. Heddaya further discloses the method where the first page is a browser page (Figure 1; column 6, lines 10-18).

As per dependent claim 22 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 1 and the same rejection is incorporated herein. Heddaya further discloses the method in which the first prefabricated page is cached (column 3, lines 29-33).

As per independent claim 23 Heddaya discloses a system for prefabricating information comprising:

- A prefabricator to manage prefabricating a first page to prefabricate a first prefabricated page (column 7, lines 10-11)

- An interceptor to intercept and information request (Figure 1; column 7, lines 24-27), the interceptor logically interposed between a user interface and a computer application (Figure 1; column 7, lines 18-27), the interceptor providing a first prefabricated page if the information request corresponds to the first page and dynamically fabricating a second page if the information request corresponds to the second page (column 7, lines 39-45)

Heddaya fails to disclose the system wherein the prefabrication is not in response to a request for the first page by a user. However, Smith discloses the system of prefabrication of a page wherein the prefabrication is not in response to a request for the first page by a user (Figures 3 and 4; column 5, line 56- column 6, line 18: Here, the pages to prefabricate are based upon pages that a user frequently visits. A page prefabrication is then scheduled for a specific time and the page is prefabricated without a user requesting the prefabricated page).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya's system of prefabrication with Smith's system of prefabrication, since it would have allowed a user to save server access time, conserve cache space, and reduce the risk of conflicting with the user's use of the telephone (Smith: column 5, lines 60-62).

Further, Heddaya and Smith fail to specifically disclose the method wherein the act of prefabrication the page comprises querying a database to obtained cached data, processing the data received from the database, and packaging the information associated with the data in a prescribed format. However, Copeland discloses the

Art Unit: 2178

method wherein the act of prefabrication the page comprises querying a database to obtain cached data, processing the data received from the database, and packaging the information associated with the data in a prescribed format (paragraphs 0038-0041: Here, the cached data, stored in a database is retrieved. The data is then processed and packaged into a prescribed format, here the format is HTML).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya and Smith's method with Copeland's method, since it would have allowed a user to more quickly access data (Copeland: paragraph 0041).

As per dependent claim 24 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 23 and the same rejection is incorporated herein. Heddaya further discloses the system in which the prefabricator comprises a module to identify pages to prefabricate (column 3, lines 52-64).

As per dependent claim 25 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 23 and the same rejection is incorporated herein. Heddaya further discloses the system in which the prefabricator comprises a module to prioritize a list of pages to prefabricate (column 8, lines 40-43).

As per dependent claim 26 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 25 and the same rejection is incorporated herein. Heddaya further discloses the system in which the module prioritizes pages based upon a system resource parameter (column 8, lines 34-49).

As per dependent claim 27 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 25 and the same rejection is incorporated herein. Heddaya further discloses the system in which the module prioritizes the list of pages based upon a page prefabrication time parameter (Figure 10A; Figure 10B; Figure 11; column 15, lines 9-50, specifically the sections dealing with communication of lists between servers in order to determine which documents need to be requested from the main server).

As per dependent claim 30 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 23 and the same rejection is incorporated herein. Heddaya further discloses the system in which the first page corresponds to a page request, wherein the page request is processed as a second information request to the interceptor (column 9, line 65- column 10, line15; {SYN} is read as the first information request and {GET} is read as the second information request}).

As per dependent claim 31 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 30 and the same rejection is incorporated herein. Heddaya further discloses the system in which the prefabricator comprises a module to determine a number of page requests to concurrently process into prefabricated pages (column 8, lines 34-49).

As per dependent claim 32 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 31 and the same rejection is incorporated herein. Heddaya further discloses the system in which the number of concurrent page requests increases when available system resources increase (column 8, lines 34-49).

As per dependent claim 34 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 23 and the same rejection is incorporated herein. Heddaya further discloses the system in which the prefabricator accesses a prefabrication policy to manage prefabricating the first page (column 3, lines 49-51).

As per dependent claim 35 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 23 and the same rejection is incorporated herein. Heddaya further discloses the system in which the user interface comprises a browser (column 6, lines 19-24).

As per dependent claim 37 Heddaya, Smith, and Copeland disclose the limitations similar to those in claim 23 and the same rejection is incorporated herein. Heddaya further discloses the system in which the interceptor is a web server (column 6, lines 19-24; column 7, lines 24-27).

As per dependent claim 38 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 23 and the same rejection is incorporated herein. Heddaya further discloses the system in which the interceptor is a cache server (column 7, lines 24-27).

As per dependent claim 39 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 23 and the same rejection is incorporated herein. Heddaya further discloses the system in which the prefabricator comprises a module to monitor system resources (column 8, lines 22-28).

As per dependent claim 40 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 23 and the same rejection is incorporated herein.

Heddaya further discloses the system in which the prefabricator and the interceptor are logically associated with a first network node, wherein the system further comprised:

- A second prefabricator and a second interceptor logically associated with a second network node (Figure 1; column 14, lines 1-7).

As per dependent claim 41 Heddaya and Smith discloses the limitations similar to those in claim 40 and the same rejection is incorporated herein. Heddaya further discloses the system in which the routing component routes information requests among the first and second network nodes (Figure 1; column 14, lines 1-7).

As per dependent claim 42 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 40 and the same rejection is incorporated herein. Heddaya further discloses the system in which a load distributor distributes a prefabrication workload among the first and second network nodes (column 8, lines 34-49).

As per dependent claim 43 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 42 and the same rejection is incorporated herein. Heddaya further discloses the system in which the prefabrication workload is distributed based upon system resource levels at the first and second nodes (column 8, lines 34-49).

As per dependent claim 44 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 43 and the same rejection is incorporated herein. Heddaya further discloses the system in which a node is assigned a share of the prefabrication workload based on a resource level of the node (column 8, lines 34-49).

As per dependent claim 45 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 43 and the same rejection is incorporated herein. Heddaya further discloses the system in which the first and second network nodes are assigned work from the prefabricated workload in a coordinated manner (column 8, lines 34-49).

As per dependent claim 46 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 43 and the same rejection is incorporated herein. Heddaya further discloses the system in which the first and second network nodes are assigned work from the prefabricated workload in a coordinated manner (column 8, lines 34-49).

As per dependent claim 47 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 40 and the same rejection is incorporated herein. Heddaya further discloses the system in which the prefabricated pages are stored in a network accessible storage device (column 6, lines 7-9).

As per dependent claim 48 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 23 and the same rejection is incorporated herein. Heddaya further discloses the system which is non-intrusively implemented with an existing computer application such that code changes are not preformed against the existing computer application (column 9, lines 57-60; column 11, lines 40-51).

As per independent claim 49 Heddaya discloses a method for prefabricating information pages comprising:

- Prefabricating a first page on a first node to produce a first prefabricated page (column 7, lines 10-11)
- Storing the first prefabricated page (column 7, lines 10-11)
- Prefabricating a second page on a second node to produce a second prefabricated page (column 7, lines 10-11; column 6, lines 7-9)
- Storing the second prefabricated page (column 7, lines 10-11; column 6, lines 7-9)
- Receiving an information request (column 7, lines 18-24)
- Providing the first prefabricated page if the information request corresponds to the first page (column 7, lines 24-27)
- Providing the second prefabricated page if the information request corresponds to the second page (column 7, lines 24-27; column 6, lines 6-9)

Heddaya fails to disclose the method wherein the prefabrication is not in response to a request for the first page by a user. However, Smith discloses the method of prefabrication of a page wherein the prefabrication is not in response to a request for the first page by a user (Figures 3 and 4; column 5, line 56- column 6, line 18: Here, the pages to prefabricate are based upon pages that a user frequently visits. A page prefabrication is then scheduled for a specific time and the page is prefabricated without a user requesting the prefabricated page).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya's method of prefabrication with Smith's method of prefabrication, since it would have allowed a user to save server access time,

conserve cache space, and reduce the risk of conflicting with the user's use of the telephone (Smith: column 5, lines 60-62).

Further, Heddaya and Smith fail to specifically disclose the method wherein the act of prefabrication the page comprises querying a database to obtained cached data, processing the data received from the database, and packaging the information associated with the data in a prescribed format. However, Copeland discloses the method wherein the act of prefabrication the page comprises querying a database to obtained cached data, processing the data received from the database, and packaging the information associated with the data in a prescribed format (paragraphs 0038-0041: Here, the cached data, stored in a database is retrieved. The data is then processed and packaged into a prescribed format, here the format is HTML).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya and Smith's method with Copeland's method, since it would have allowed a user to more quickly access data (Copeland: paragraph 0041).

As per dependent claim 50 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 49 and the same rejection is incorporated herein. Heddaya further discloses the method further comprising:

- Routing the information request to either the first or second node (column 6, lines 40-46)

As per dependent claim 51 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 49 and the same rejection is incorporated herein.

Art Unit: 2178

Heddaya further discloses the method in which the first node accesses the second prefabricated page to satisfy the information request (column 7, lines 52-56; Figure 10A; Figure 10B; Figure 11; column 15, lines 9-50, specifically the sections dealing with communication of lists between servers in order to determine which documents need to be requested from the main server; column 7, lines 24-27).

As per dependent claim 52 Heddaya, Smith, and Copeland disclose the limitations similar to those in claim 49 and the same rejection is incorporated herein. Heddaya further discloses the method in which the first and second prefabricated pages are stored on a network accessible storage device (column 6, lines 6-9).

As per dependent claim 53 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 52 and the same rejection is incorporated herein. Heddaya further discloses the method in which network accessible storage device comprises a NFS-compliant device (column 6, lines 6-31).

As per dependent claim 54 Heddaya, Smith, and Copeland disclose the limitations similar to those in claim 49 and the same rejection is incorporated herein. Heddaya further discloses the method in which a prefabrication workload is distributed among the first and second node (column 8, lines 34-49).

As per dependent claim 55 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 54 and the same rejection is incorporated herein. Heddaya further discloses the method in which a node is assigned a share of the prefabrication workload based on a resource level of the node (column 8, lines 34-49).

As per dependent claim 56 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 54 and the same rejection is incorporated herein. Heddaya further discloses the system in which the node having the lower resource level is assigned a smaller share of the prefabrication workload (column 8, lines 34-49).

As per dependent claim 57 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 54 and the same rejection is incorporated herein. Heddaya further discloses the method in which the first and second nodes are assigned work from the prefabricated workload in a coordinated manner (column 8, lines 34-49).

As per independent claim 63 Heddaya discloses obtaining one or more parameters that define how a page should be prefabricated (column 8, lines 34-49). Heddaya fails to disclose the method wherein the prefabrication is not in response to a request for the first page by a user. However, Smith discloses the method of prefabrication of a page wherein the prefabrication is not in response to a request for the first page by a user (Figures 3 and 4; column 5, line 56- column 6, line 18: Here, the pages to prefabricate are based upon pages that a user frequently visits. A page prefabrication is then scheduled for a specific time and the page is prefabricated without a user requesting the prefabricated page).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya's method of prefabrication with Smith's method of prefabrication, since it would have allowed a user to save server access time, conserve cache space, and reduce the risk of conflicting with the user's use of the telephone (Smith: column 5, lines 60-62).

Further, Heddaya and Smith fail to specifically disclose the method wherein the act of prefabrication the page comprises querying a database to obtained cached data, processing the data received from the database, and packaging the information associated with the data in a prescribed format. However, Copeland discloses the method wherein the act of prefabrication the page comprises querying a database to obtained cached data, processing the data received from the database, and packaging the information associated with the data in a prescribed format (paragraphs 0038-0041: Here, the cached data, stored in a database is retrieved. The data is then processed and packaged into a prescribed format, here the format is HTML).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya and Smith's method with Copeland's method, since it would have allowed a user to more quickly access data (Copeland: paragraph 0041).

As per dependent claim 65 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 63 and the same rejection is incorporated herein. Heddaya further discloses the prefabrication policy that is configured to identify pages to prefabricate (column 8, lines 34-49; column 3, lines 49-59).

As per dependent claim 67 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 63 and the same rejection is incorporated herein. Heddaya further discloses the prefabrication policy comprising a scheduling parameter (column 8, lines 34-49).

As per dependent claim 68 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 63 and the same rejection is incorporated herein. Heddaya further discloses the prefabrication policy comprising a refresh rate parameter (column 3, lines 49-62).

As per independent claim 70 Heddaya discloses a computer program product that include a medium usable by a processor having stored thereon a sequence of instructions which, when executed by said processor, causes said processor to execute a process for prefabricating an information page, the process comprising:

- Prefabricating a first page in accordance with a definable prefabrication policy to produce a first prefabricated page (column 7, lines 10-11)
- Receiving an information request (column 7, lines 18-24)
- Determining if the information request corresponds to the first page (column 7, lines 24-27)
- Providing the first prefabricated page if the information request corresponds to the first page (column 7, lines 24-27)
- Dynamically fabricating a second page if the information request corresponds to the second page (column 7, lines 42-45)

Heddaya fails to disclose the product wherein the prefabrication is not in response to a request for the first page by a user. However, Smith discloses the product of prefabrication of a page wherein the prefabrication is not in response to a request for the first page by a user (Figures 3 and 4; column 5, line 56- column 6, line 18: Here, the pages to prefabricate are based upon pages that a user frequently visits. A page

prefabrication is then scheduled for a specific time and the page is prefabricated without a user requesting the prefabricated page).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya's product for prefabrication with Smith's product for prefabrication, since it would have allowed a user to save server access time, conserve cache space, and reduce the risk of conflicting with the user's use of the telephone (Smith: column 5, lines 60-62).

Further, Heddaya and Smith fail to specifically disclose the method wherein the act of prefabrication the page comprises querying a database to obtain cached data, processing the data received from the database, and packaging the information associated with the data in a prescribed format. However, Copeland discloses the method wherein the act of prefabrication the page comprises querying a database to obtain cached data, processing the data received from the database, and packaging the information associated with the data in a prescribed format (paragraphs 0038-0041: Here, the cached data, stored in a database is retrieved. The data is then processed and packaged into a prescribed format, here the format is HTML).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya and Smith's method with Copeland's method, since it would have allowed a user to more quickly access data (Copeland: paragraph 0041).

As per independent claim 71 Heddaya discloses a computer program product that includes a medium usable by a processor having stored thereon a sequence of

Art Unit: 2178

instructions which, when executed by said processor, causes said processor to execute a process for prefabricating an information page, the process comprising:

- Prefabricating a first page on a first node to produce a first prefabricated page (column 7, lines 10-11)
- Storing the first prefabricated page (column 7, lines 10-11)
- Prefabricating a second page on a second node to produce a second prefabricated page (column 7, lines 10-11; column 6, lines 7-9)
- Storing the second prefabricated page (column 7, lines 10-11; column 6, lines 7-9)
- Receiving an information request (column 7, lines 18-24)
- Providing the first prefabricated page if the information request corresponds to the first page (column 7, lines 24-27)
- Providing the second prefabricated page if the information request corresponds to the second page (column 7, lines 24-27; column 6, lines 6-9)

Heddaya fails to disclose the product wherein the prefabrication is not in response to a request for the first page by a user. However, Smith discloses the product of prefabrication of a page wherein the prefabrication is not in response to a request for the first page by a user (Figures 3 and 4; column 5, line 56- column 6, line 18: Here, the pages to prefabricate are based upon pages that a user frequently visits. A page prefabrication is then scheduled for a specific time and the page is prefabricated without a user requesting the prefabricated page).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya's product for prefabrication with Smith's product for prefabrication, since it would have allowed a user to save server access time, conserve cache space, and reduce the risk of conflicting with the user's use of the telephone (Smith: column 5, lines 60-62).

Further, Heddaya and Smith fail to specifically disclose the method wherein the act of prefabrication the page comprises querying a database to obtained cached data, processing the data received from the database, and packaging the information associated with the data in a prescribed format. However, Copeland discloses the method wherein the act of prefabrication the page comprises querying a database to obtained cached data, processing the data received from the database, and packaging the information associated with the data in a prescribed format (paragraphs 0038-0041: Here, the cached data, stored in a database is retrieved. The data is then processed and packaged into a prescribed format, here the format is HTML).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya and Smith's method with Copeland's method, since it would have allowed a user to more quickly access data (Copeland: paragraph 0041).

As per dependent claim 72, Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 70, and the same rejection is incorporated herein. The applicant further discloses the limitations similar to those in claim 2. Claim 72 is similarly rejected under Heddaya and Smith.

As per dependent claim 75, Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 70, and the same rejection is incorporated herein. The applicant further discloses the limitations similar to those in claim 7. Claim 75 is similarly rejected under Heddaya, Smith, and Copeland.

As per dependent claim 77, Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 70, and the same rejection is incorporated herein. The applicant further discloses the limitations similar to those in claim 10. Claim 77 is similarly rejected under Heddaya, Smith, and Copeland.

As per dependent claim 78, Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 70, and the same rejection is incorporated herein. The applicant further discloses the limitations similar to those in claim 15. Claim 78 is similarly rejected under Heddaya, Smith, and Copeland.

As per dependent claim 80, Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 70, and the same rejection is incorporated herein. The applicant further discloses the limitations similar to those in claim 21. Claim 80 is similarly rejected under Heddaya, Smith, and Copeland.

As per dependent claim 81, Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 70, and the same rejection is incorporated herein. The applicant further discloses the limitations similar to those in claim 22. Claim 81 is similarly rejected under Heddaya, Smith, and Copeland.

As per dependent claim 82, Heddaya, Smith, and Copeland disclose the limitations similar to those in claim 70, and the same rejection is incorporated herein.

Art Unit: 2178

Smith further discloses the prefabrication is performed in response to a request initiated by a software, a hardware, or a combination of both (column 5, line 35- column 6, line 8: Here, the system (a combination of hardware and software) initiates the request for content depending upon a users previous activity).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya, Smith, and Copeland's method of prefabrication with Smith's method of prefabrication, since it would have allowed a user to save server access time, conserve cache space, and reduce the risk of conflicting with the user's use of the telephone (Smith: column 5, lines 60-62).

As per dependent claim 83, Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 71, and the same rejection is incorporated herein. The applicant further discloses the limitations similar to those in claim 41. Claim 83 is similarly rejected under Heddaya, Smith, and Copeland.

As per dependent claim 84, Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 71, and the same rejection is incorporated herein. The applicant further discloses the limitations similar to those in claim 51. Claim 84 is similarly rejected under Heddaya, Smith, and Copeland.

As per dependent claim 85, Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 71, and the same rejection is incorporated herein. The applicant further discloses the limitations similar to those in claim 52. Claim 85 is similarly rejected under Heddaya, Smith, and Copeland.

As per dependent claim 86, Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 71, and the same rejection is incorporated herein. The applicant further discloses the limitations similar to those in claim 42. Claim 86 is similarly rejected under Heddaya, Smith, and Copeland.

As per dependent claim 87, Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 71, and the same rejection is incorporated herein. The applicant further discloses the limitations similar to those in claim 82. Claim 87 is similarly rejected under Heddaya, Smith, and Copeland.

As per dependent claim 88, Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 1, and the same rejection is incorporated herein. The applicant further discloses the limitations similar to those in claim 82. Claim 88 is similarly rejected under Heddaya, Smith, and Copeland.

As per dependent claim 89, Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 49, and the same rejection is incorporated herein. The applicant further discloses the limitations similar to those in claim 82. Claim 89 is similarly rejected under Heddaya, Smith, and Copeland.

As per dependent claim 91, Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 63, and the same rejection is incorporated herein. The applicant further discloses the limitations similar to those in claim 82. Claim 91 is similarly rejected under Heddaya, Smith, and Copeland.

7. Claims 4-5, 33, and 73 remain rejected under 35 U.S.C. 103(a) as being unpatentable over Heddaya, Smith, and Copeland and further in view of Eichstaedt et al. (U.S. 6,182,085).

As per dependent claim 4, Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 1, and the same rejection is incorporated herein. Heddaya also discloses determining if additional pages should be prefabricated (column 8, lines 40-43) and prefabrication of pages (column 7, lines 10-11). However, Heddaya and Smith does not disclose crawling a page. However, Eichstaedt discloses crawling a page (Figure 3; column 5, lines 13-20).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya, Smith, and Copeland's method for determining which pages to prefabricate and Heddaya's prefabrication method with Eichstaedt's method of crawling pages since it would have allowed for pages linked to the first prefabricated page to be prefabricated so that a user would have been able to access pages more rapidly.

As per dependent claim 5, Heddaya, Smith, Copeland, and Eichstaedt disclose the limitation similar to those in claim 4 and the same rejection is incorporated herein. Heddaya also discloses the method in which a first page is prefabricated (column 7, lines 10-11). Although Heddaya is silent on a start page, it is well known that a start page is a type of page and is inherently included in Heddaya's method of page prefabrication.

As per dependent claim 33, Heddaya, Smith, and Copeland disclose the limitations similar to those in claim 23 and the same rejection is incorporated herein. Heddaya fails to disclose the system in which the prefabricator comprises a module to crawl the first prefabricated page for additional pages to prefabricate. However, Eichstaedt discloses crawling a page (Figure 3; column 5, lines 13-20).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya, Smith, and Copeland's system to prefabricate pages with Eichstaedt's method of crawling pages since it would have allowed for pages linked to the first prefabricated page to be prefabricated so that a user would have been able to access pages more rapidly.

As per dependent claim 72, Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 70, and the same rejection is incorporated herein. The applicant further discloses the limitations similar to those in claim 4. Claim 72 is similarly rejected under Heddaya, Smith, Copeland, and Eichstaedt.

8. Claims 6, 9, 19, 28, 36, 58-62, 64, 74, 76, and 90 remain rejected under 35 U.S.C. 103(a) as being unpatentable over Heddaya, Smith, and Copeland and further in view of Reiche (U.S. 6,092,192).

As per dependent claim 6 Heddaya, Smith, and Copeland disclose the limitation similar to those in claim 1, and the same rejection is incorporated herein. Heddaya also discloses packaging information into the first prefabricated page (column 3, lines 49-51). Heddaya fails to disclose the method further comprising querying a database for

information and processing the information. However, Reiche discloses querying a database for information, processing the information, and using the processed information for pages (column 6, lines 26-36).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya, Smith, and Copeland's prefabrication method with Reiche's method of querying a database, processing information, and using the processed information for pages, since it would have allowed for prefabricated processed information to be quickly accessible.

As per dependent claim 9 Heddaya, Smith, and Copeland disclose the limitations similar to those in claim 1, and the same rejection is incorporated herein. Heddaya fails to disclose a definable prefabrication policy that applies to a specific user or class of users. However, Reiche discloses a policy of allowing a specific user or a class of users to see documents based upon user verification (column 6, lines 26-36).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya, Smith, and Copland's prefabrication policy with Reiche's policy of allowing a specific user or group of users access to certain document, since it would have allowed for user specific information to be displayed only to authorized users.

As per dependent claim 28 Heddaya, Smith, and Copeland disclose the limitations similar to those in claim 25, and the same rejection is incorporated herein. Heddaya fails to disclose a user access parameter. However, Reiche discloses a policy

of allowing a specific user or a class of users to see documents based upon user verification (column 6, lines 26-36).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya, Smith, and Copeland's policy of prioritizing a list of pages to prefabricate with Reiche's policy of allowing a specific user or group of users access to certain document, since it would have allowed for pages to be prefabricated in order to ensure that users with certain permissions received pages more quickly than other users.

As per dependent claim 36 Heddaya, Smith, and Copeland disclose the limitations similar to those in claim 23, and the same rejection is incorporated herein. Heddaya fails to disclose the system in which the computer application comprises a database application. However, Reiche discloses a database application (column 5, lines 32-42).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya, Smith, and Copeland's system for prefabricating information with Reiche's use of a database application, since it would have allowed for information stored in the database to be prefabricated and available for efficient access.

As per independent claim 58 Heddaya and Smith disclose a method for prefabricating an information page comprising:

- Prefabricating a first page to produce a first prefabricated page (column 7, lines 10-11)

Art Unit: 2178

- Receiving an information request from a user (column 7, lines 18-24)
- Determining if the information request corresponds to the first page (column 7, lines 24-27)
- Providing the first prefabricated page if the information request corresponds to the first page (column 7, lines 24-27)
- Dynamically fabricating a second page if the information request corresponds to the second page (column 7, lines 42-45)
- Prefabrication wherein the prefabrication is not in response to a request for the first page by a user (Smith: Figures 3 and 4; column 5, line 56- column 6, line 18)

Heddaya and Smith fail to disclose the use of a session identifier when receiving an information request from a user and Heddaya also fails to disclose providing the first prefabricated page with the session identifier if the information request corresponds to the first page. However, Reiche discloses the use of "receiving an information request from a user having a session identifier" (column 4, lines 54-65). Reiche further discloses providing a page with the session identifier if the request is accepted (column 5, lines 1-4; column 6, lines 8-10 and lines 21-36).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya and Smith's method of prefabrication of information with Reiche's method of user verification and data integrity, since it would have allowed a server to verify that unauthorized users were not able to obtain sensitive information from a prefabricated document.

Further, Heddaya and Smith fail to specifically disclose the method wherein the act of prefabrication the page comprises querying a database to obtained cached data, processing the data received from the database, and packaging the information associated with the data in a prescribed format. However, Copeland discloses the method wherein the act of prefabrication the page comprises querying a database to obtained cached data, processing the data received from the database, and packaging the information associated with the data in a prescribed format (paragraphs 0038-0041: Here, the cached data, stored in a database is retrieved. The data is then processed and packaged into a prescribed format, here the format is HTML).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya and Smith's method with Copeland's method, since it would have allowed a user to more quickly access data (Copeland: paragraph 0041).

As per dependent claim 59, Heddaya, Smith, Copeland, and Reiche disclose the limitations similar to those in claim 58. Heddaya fails to disclose verifying the validity of a session identifier. However, Reiche discloses verification of a session identifier (column 5, lines 32-42).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya, Smith, Copeland, and Reiche's method of prefabrication of information with Reiche's method of verification of a session identifier, since it would have allowed a server to verify that unauthorized users were not able to obtain sensitive information from a prefabricated document.

As per dependent claim 60, Heddaya, Smith, Copeland, and Reiche disclose the limitations similar to those in claim 59. Heddaya discloses a message passing between network nodes (column 14, lines 4-7). Heddaya fails to disclose verifying the validity of the session identifier to one or more nodes. However, Reiche discloses verification of a session identifier (column 5, lines 32-42).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya, Smith, Copeland, and Reiche's method of message passing between network nodes with Reiche's method of verification of session identifiers, since it would have allowed all nodes on a network to know that document requests from a specified session were valid.

As per dependent claim 61 Heddaya, Smith, Copeland, and Reiche disclose the limitations similar to those in claim 58. Heddaya discloses prefabrication of a first page. Heddaya does not disclose the first page as a URL parameter. However, Reiche discloses a page as a URL parameter (column 5, lines 6-10).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya, Smith, Copeland, and Reiche's method of page prefabrication to Reiche's method of using a URL parameter in order to verify a user, since it would have allowed for a redirection to be made either to or from a log-in server and thus allowing for user identification.

As per dependent claim 62 Heddaya, Smith, Copeland, and Reiche disclose the limitations similar to those in claim 58. Heddaya discloses prefabrication of a first page.

Art Unit: 2178

Heddaya does not disclose the first page as a cookie value. However, Reiche discloses using a cookie value (column 6, lines 5-10).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya, Smith, Copeland, and Reiche's method of page prefabrication to Reiche's method of using a cookie value in order to verify a user, since it would have allowed for user to validate their identity a single time with relevant user identification stored in a cookie.

As per dependent claim 64 Heddaya, Smith, Copeland, and Reiche disclose the limitations similar to those in claim 63, and the same rejection is incorporated herein. Heddaya fails to disclose a method that applies to a specific user or class of users. However, Reiche discloses a policy of allowing a specific user or a class of users to see documents based upon user verification (column 6, lines 26-36).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya, Smith, Copeland, and Reiche's prefabrication policy with Reiche's policy of allowing a specific user or group of users access to certain document, since it would have allowed for user specific information to be displayed only to authorized users.

As per dependent claim 74, Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 70, and the same rejection is incorporated herein. The applicant further discloses the limitations similar to those in claim 6. Claim 74 is similarly rejected under Heddaya, Smith, Copeland and Reiche.

As per dependent claim 76, Heddaya, Smith, and Copeland disclose's the limitations similar to those in claim 70, and the same rejection is incorporated herein. The applicant further discloses the limitations similar to those in claim 9. Claim 76 is similarly rejected under Heddaya, Smith, Copeland and Reiche.

As per dependent claim 90, Heddaya, Smith, Copeland discloses the limitations similar to those in claim 58, and the same rejection is incorporated herein. The applicant further discloses the limitations similar to those in claim 82. Claim 90 is similarly rejected under Heddaya, Smith, Copeland and Reiche.

9. Claims 12 and 66 remain rejected under 35 U.S.C. 103(a) as being unpatentable over Heddaya, Smith, and Copeland in further view of Lapstun et al. (U.S. 6,549,935).

As per dependent claim 12 Heddaya, Smith, and Copeland disclose the limitation similar to those in claim 1, and the same rejection is incorporated herein. Heddaya fails to disclose a policy comprising an application identifier. However, Lapstun discloses an application identifier (column 17, lines 55-58).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya, Smith, and Copeland's method with Lapstun's application identifier, since it would have allowed applications to be referenced by pages and other applications.

As per dependent claim 66 Heddaya, Smith, and Copeland disclose the limitation similar to those in claim 63, and the same rejection is incorporated herein. Heddaya fails to disclose a policy comprising an application for which a page should be

prefabricated. However, Lapstun discloses an application identifier to identify applications (column 17, lines 55-58).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya, Smith, and Copeland's policy with Lapstun's application identifier, since it would have allowed applications to be referenced by pages and other applications.

10. Claims 16-17, 20, 69, and 79 remain rejected under 35 U.S.C. 103(a) as being unpatentable over Heddaya, Smith, and Copeland in further view of Birnbaum (U.S. 5,797,128).

As per dependent claim 16 Heddaya, Smith, and Copeland disclose the limitations similar to those in claim 1, and the same rejection is incorporated herein. Heddaya fails to disclose a definable prefabrication policy organized as a hierarchy of policies. However, Birnbaum discloses a system with a hierarchy of policies (column 4, lines 27-32).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya, Smith, and Copeland's prefabrication policy with Birnbaum's hierarchy of policies, since it would have allowed for policy groups containing parents and children (Birnbaum: column 5, lines 60-63).

As per dependent claim 17 Heddaya, Smith, Copeland, and Birnbaum disclose the limitations similar to those in claim 16, and the same rejection is incorporated

Art Unit: 2178

herein. Birnbaum also discloses the policy comprising a system policy (column 4, lines 27-32).

As per dependent claim 20 Heddaya, Smith, Copeland and Birnbaum disclose the limitations similar to those in claim 16, and the same rejection is incorporated herein. Heddaya also discloses the policy comprising a transient policy (column 8, lines 29-49).

As per dependent claim 69 Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 63, and the same rejection is incorporated herein. Heddaya fails to disclose parameters organized as a hierarchy of policies categories. However, Birnbaum discloses a system with a hierarchy of policies (column 4, lines 27-32).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya, Smith, and Copeland's prefabrication policy with Birnbaum's hierarchy of policies, since it would have allowed for policy groups containing parents and children (Birnbaum: column 5, lines 60-63).

As per dependent claim 79, Heddaya, Smith, and Copeland discloses the limitations similar to those in claim 70, and the same rejection is incorporated herein. The applicant further discloses the limitations similar to those in claim 16. Claim 79 is similarly rejected under Heddaya, Smith, Copeland and Birnbaum.

11. Claim 18 remains rejected under 35 U.S.C. 103(a) as being unpatentable over Heddaya, Smith, Copeland and Birnbaum in further view of Lapstun et al. (U.S. 6,549,935).

As per dependent claim 18 Heddaya, Smith, Copeland, and Birnbaum disclose the limitation similar to those in claim 16, and the same rejection is incorporated herein. Heddaya fails to disclose a policy comprising an application identifier. However, Lapstun discloses an application identifier (column 17, lines 55-58).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya, Smith, Copeland and Birnbaum's method with Lapstun's application identifier, since it would have allowed applications to be referenced by pages and other applications.

12. Claim 19 remains rejected under 35 U.S.C. 103(a) as being unpatentable over Heddaya, Smith, Copeland, and Birnbaum in further view of Reiche.

As per dependent claim 19 Heddaya, Smith, Copeland, and Birnbaum disclose the limitations similar to those in claim 16, and the same rejection is incorporated herein. Heddaya fails to disclose a definable prefabrication policy that applies to a specific user or class of users. However, Reiche discloses a policy of allowing a specific user or a class of users to see documents based upon user verification (column 6, lines 26-36).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya, Smith, Copeland, and Birnbaum's

prefabrication policy with Reiche's policy of allowing a specific user or group of users access to certain document, since it would have allowed for user specific information to be displayed only to authorized users.

13. Claim 29 remains rejected under 35 U.S.C. 103(a) as being unpatentable over Heddaya, Smith, and Copeland in further view of Genty et al. (U.S. 2002/0078165).

As per dependent claim 29 Heddaya, Smith, and Copeland disclose the limitations similar to those in claim 25, and the same rejection is incorporated herein. Heddaya fails to disclose the system in which the module prioritizes the list of pages based upon a page depth parameter. Genty discloses generating pages based upon page depth (page 1, paragraph 0009).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya, Smith, and Copeland's system to prioritize pages to generate with Genty's system of pre-fetching pages at various depths, since it would have allowed for pages commonly visited by a user to be fetched and stored for more rapid access (Genty: page 1, paragraph 0009).

14. Claims 1-3, 7-8, 10-11, 13-15, 21-27, 30-32, 34-35, 37-57, 63, 65, 67-68, 70-72, 75, 77-78, 80-89, and 91 are rejected under 35 U.S.C. 103(a) as being unpatentable over Heddaya in further view of Smith and Wittgreffe et al. (US 6253208, filed 31 March 1998, hereafter Wittgreffe).

As per independent claim 1 Heddaya discloses a method for prefabricating an information page, comprising:

- Prefabricating a first page in accordance with a definable prefabrication policy to produce a first prefabrication page (column 7, lines 10-11)
- Receiving an information request (column 7, lines 18-24)
- Determining if the information request corresponds to the first page (column 7, lines 24-27)
- Dynamically fabricating a second page if the information request corresponds to the second page (column 7, lines 42-45)

Heddaya fails to disclose the method wherein the prefabrication is not in response to a request for the first page by a user. However, Smith discloses the method of prefabrication of a page wherein the prefabrication is not in response to a request for the first page by a user (Figures 3 and 4; column 5, line 56- column 6, line 18: Here, the pages to prefabricate are based upon pages that a user frequently visits. A page prefabrication is then scheduled for a specific time and the page is prefabricated without a user requesting the prefabricated page).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya's method of prefabrication with Smith's method of prefabrication, since it would have allowed a user to save server access time, conserve cache space, and reduce the risk of conflicting with the user's use of the telephone (Smith: column 5, lines 60-62).

Further, Heddaya and Smith fail to specifically disclose the method wherein the act of prefabrication the page comprises querying a database to obtained cached data, processing the data received from the database, and packaging the information associated with the data in a prescribed format. However, Wittgreffe discloses the method wherein the act of prefabrication the page comprises querying a database to obtained cached data, processing the data received from the database, and packaging the information associated with the data in a prescribed format (column 2, lines 23-50).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya and Smith's method with Wittgreffe's method, since it would have allowed a user to more quickly access data.

As per dependent claim 2 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 1 and the same rejection is incorporated herein.

Heddaya further discloses a method:

- Determining if the first prefabrication page is stale (column 3, lines 49-51)
- Dynamically fabricating the first page if the first prefabricated page is stale (column 3, lines 57-59)

As per dependent claim 3 Heddaya , Smith, and Wittgreffe discloses the limitations similar to those in claim 3 and the same rejection is incorporated herein. Heddaya further discloses a method where a time factor is considered in determining whether the first prefabricated page is stale (column 3, lines 60-62).

As per dependent claim 7 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 1 and the same rejection is incorporated herein.

Art Unit: 2178

Heddaya further discloses the method where a system resource level is considered before schedule the action of page prefabrication (column 8, lines 5-13; column 8, lines 20-28).

As per dependent claim 8 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 7 and the same rejection is incorporated herein. Heddaya further discloses the method in which the system resource level is a resource measure selected from the group consisting of: CPU usage level, memory usage level, and number of pending prefabrication requests (column 8, lines 20-49).

As per dependent claim 10 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 1 and the same rejection is incorporated herein. Heddaya further discloses the method in which the definable prefabrication policy identifies pages to prefabricate (column 3, lines 52-64).

As per dependent claim 11 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 10 and the same rejection is incorporated herein. Heddaya further discloses the method in which the definable prefabrication policy comprises a responsibility parameter (column 8, lines 34-49).

As per dependent claim 13 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 10 and the same rejection is incorporated herein. Heddaya further discloses the method in which the definable prefabrication policy comprises a scheduling parameter (column 3, lines 60-62). Here, the update of material can be either "periodically or at a scheduled update time." Both of these options disclose definable prefabrication policy.

As per dependent claim 14 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 10 and the same rejection is incorporated herein. Heddaya further discloses the method in which the definable prefabrication policy comprises a refresh rate parameter (column 3, lines 60-62). In this instance, the updated material can be refreshed at a "scheduled update time" which is a refresh rate parameter.

As per dependent claim 15 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 1 and the same rejection is incorporated herein. Heddaya further discloses the method in which auto-tuning of the prefabrication step is performed to minimize interference with other system workload (column 4, lines 22-43).

As per dependent claim 21 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 1 and the same rejection is incorporated herein. Heddaya further discloses the method where the first page is a browser page (Figure 1; column 6, lines 10-18).

As per dependent claim 22 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 1 and the same rejection is incorporated herein. Heddaya further discloses the method in which the first prefabricated page is cached (column 3, lines 29-33).

As per independent claim 23 Heddaya discloses a system for prefabricating information comprising:

- A prefabricator to manage prefabricating a first page to prefabricate a first prefabricated page (column 7, lines 10-11)

- An interceptor to intercept and information request (Figure 1; column 7, lines 24-27), the interceptor logically interposed between a user interface and a computer application (Figure 1; column 7, lines 18-27), the interceptor providing a first prefabricated page if the information request corresponds to the first page and dynamically fabricating a second page if the information request corresponds to the second page (column 7, lines 39-45).

Heddaya fails to disclose the system wherein the prefabrication is not in response to a request for the first page by a user. However, Smith discloses the system of prefabrication of a page wherein the prefabrication is not in response to a request for the first page by a user (Figures 3 and 4; column 5, line 56- column 6, line 18: Here, the pages to prefabricate are based upon pages that a user frequently visits. A page prefabrication is then scheduled for a specific time and the page is prefabricated without a user requesting the prefabricated page).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya's system of prefabrication with Smith's system of prefabrication, since it would have allowed a user to save server access time, conserve cache space, and reduce the risk of conflicting with the user's use of the telephone (Smith: column 5, lines 60-62).

Further, Heddaya and Smith fail to specifically disclose the method wherein the act of prefabrication the page comprises querying a database to obtained cached data, processing the data received from the database, and packaging the information associated with the data in a prescribed format. However, Wittgreffe discloses the

method wherein the act of prefabrication the page comprises querying a database to obtained cached data, processing the data received from the database, and packaging the information associated with the data in a prescribed format (column 2, lines 23-50).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya and Smith's method with Wittgreffe's method, since it would have allowed a user to more quickly access data.

As per dependent claim 24 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 23 and the same rejection is incorporated herein. Heddaya further discloses the system in which the prefabricator comprises a module to identify pages to prefabricate (column 3, lines 52-64).

As per dependent claim 25 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 23 and the same rejection is incorporated herein. Heddaya further discloses the system in which the prefabricator comprises a module to prioritize a list of pages to prefabricate (column 8, lines 40-43).

As per dependent claim 26 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 25 and the same rejection is incorporated herein. Heddaya further discloses the system in which the module prioritizes pages based upon a system resource parameter (column 8, lines 34-49).

As per dependent claim 27 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 25 and the same rejection is incorporated herein. Heddaya further discloses the system in which the module prioritizes the list of pages based upon a page prefabrication time parameter (Figure 10A; Figure 10B; Figure 11;

column 15, lines 9-50, specifically the sections dealing with communication of lists between servers in order to determine which documents need to be requested from the main server).

As per dependent claim 30 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 23 and the same rejection is incorporated herein. Heddaya further discloses the system in which the first page corresponds to a page request, wherein the page request is processed as a second information request to the interceptor (column 9, line 65- column 10, line15; {SYN} is read as the first information request and {GET} is read as the second information request}).

As per dependent claim 31 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 30 and the same rejection is incorporated herein. Heddaya further discloses the system in which the prefabricator comprises a module to determine a number of page requests to concurrently process into prefabricated pages (column 8, lines 34-49).

As per dependent claim 32 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 31 and the same rejection is incorporated herein. Heddaya further discloses the system in which the number of concurrent page requests increases when available system resources increase (column 8, lines 34-49).

As per dependent claim 34 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 23 and the same rejection is incorporated herein. Heddaya further discloses the system in which the prefabricator accesses a prefabrication policy to manage prefabricating the first page (column 3, lines 49-51).

As per dependent claim 35 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 23 and the same rejection is incorporated herein. Heddaya further discloses the system in which the user interface comprises a browser (column 6, lines 19-24).

As per dependent claim 37 Heddaya, Smith, and Wittgreffe disclose the limitations similar to those in claim 23 and the same rejection is incorporated herein. Heddaya further discloses the system in which the interceptor is a web server (column 6, lines 19-24; column 7, lines 24-27).

As per dependent claim 38 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 23 and the same rejection is incorporated herein. Heddaya further discloses the system in which the interceptor is a cache server (column 7, lines 24-27).

As per dependent claim 39 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 23 and the same rejection is incorporated herein. Heddaya further discloses the system in which the prefabricator comprises a module to monitor system resources (column 8, lines 22-28).

As per dependent claim 40 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 23 and the same rejection is incorporated herein. Heddaya further discloses the system in which the prefabricator and the interceptor are logically associated with a first network node, wherein the system further comprises:

- A second prefabricator and a second interceptor logically associated with a second network node (Figure 1; column 14, lines 1-7).

As per dependent claim 41 Heddaya and Smith discloses the limitations similar to those in claim 40 and the same rejection is incorporated herein. Heddaya further discloses the system in which the routing component routes information requests among the first and second network nodes (Figure 1; column 14, lines 1-7).

As per dependent claim 42 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 40 and the same rejection is incorporated herein. Heddaya further discloses the system in which a load distributor distributes a prefabrication workload among the first and second network nodes (column 8, lines 34-49).

As per dependent claim 43 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 42 and the same rejection is incorporated herein. Heddaya further discloses the system in which the prefabrication workload is distributed based upon system resource levels at the first and second nodes (column 8, lines 34-49).

As per dependent claim 44 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 43 and the same rejection is incorporated herein. Heddaya further discloses the system in which a node is assigned a share of the prefabrication workload based on a resource level of the node (column 8, lines 34-49).

As per dependent claim 45 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 43 and the same rejection is incorporated herein. Heddaya further discloses the system in which the first and second network nodes are

Art Unit: 2178

assigned work from the prefabricated workload in a coordinated manner (column 8, lines 34-49).

As per dependent claim 46 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 43 and the same rejection is incorporated herein. Heddaya further discloses the system in which the first and second network nodes are assigned work from the prefabricated workload in a coordinated manner (column 8, lines 34-49).

As per dependent claim 47 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 40 and the same rejection is incorporated herein. Heddaya further discloses the system in which the prefabricated pages are stored in a network accessible storage device (column 6, lines 7-9).

As per dependent claim 48 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 23 and the same rejection is incorporated herein. Heddaya further discloses the system which is non-intrusively implemented with an existing computer application such that code changes are not preformed against the existing computer application (column 9, lines 57-60; column 11, lines 40-51).

As per independent claim 49 Heddaya discloses a method for prefabricating information pages comprising:

- Prefabricating a first page on a first node to produce a first prefabricated page (column 7, lines 10-11)
- Storing the first prefabricated page (column 7, lines 10-11)

Art Unit: 2178

- Prefabricating a second page on a second node to produce a second prefabricated page (column 7, lines 10-11; column 6, lines 7-9)
- Storing the second prefabricated page (column 7, lines 10-11; column 6, lines 7-9)
- Receiving an information request (column 7, lines 18-24)
- Providing the first prefabricated page if the information request corresponds to the first page (column 7, lines 24-27)
- Providing the second prefabricated page if the information request corresponds to the second page (column 7, lines 24-27; column 6, lines 6-9)

Heddaya fails to disclose the method wherein the prefabrication is not in response to a request for the first page by a user. However, Smith discloses the method of prefabrication of a page wherein the prefabrication is not in response to a request for the first page by a user (Figures 3 and 4; column 5, line 56- column 6, line 18: Here, the pages to prefabricate are based upon pages that a user frequently visits. A page prefabrication is then scheduled for a specific time and the page is prefabricated without a user requesting the prefabricated page).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya's method of prefabrication with Smith's method of prefabrication, since it would have allowed a user to save server access time, conserve cache space, and reduce the risk of conflicting with the user's use of the telephone (Smith: column 5, lines 60-62).

Further, Heddaya and Smith fail to specifically disclose the method wherein the act of prefabrication the page comprises querying a database to obtained cached data, processing the data received from the database, and packaging the information associated with the data in a prescribed format. However, Wittgreffe discloses the method wherein the act of prefabrication the page comprises querying a database to obtained cached data, processing the data received from the database, and packaging the information associated with the data in a prescribed format (column 2, lines 23-50).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya and Smith's method with Wittgreffe's method, since it would have allowed a user to more quickly access data.

As per dependent claim 50 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 49 and the same rejection is incorporated herein. Heddaya further discloses the method further comprising:

- Routing the information request to either the first or second node (column 6, lines 40-46)

As per dependent claim 51 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 49 and the same rejection is incorporated herein. Heddaya further discloses the method in which the first node accesses the second prefabricated page to satisfy the information request (column 7, lines 52-56; Figure 10A; Figure 10B; Figure 11; column 15, lines 9-50, specifically the sections dealing with communication of lists between servers in order to determine which documents need to be requested from the main server; column 7, lines 24-27).

As per dependent claim 52 Heddaya, Smith, and Wittgreffe disclose the limitations similar to those in claim 49 and the same rejection is incorporated herein. Heddaya further discloses the method in which the first and second prefabricated pages are stored on a network accessible storage device (column 6, lines 6-9).

As per dependent claim 53 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 52 and the same rejection is incorporated herein. Heddaya further discloses the method in which network accessible storage device comprises a NFS-compliant device (column 6, lines 6-31).

As per dependent claim 54 Heddaya, Smith, and Wittgreffe disclose the limitations similar to those in claim 49 and the same rejection is incorporated herein. Heddaya further discloses the method in which a prefabrication workload is distributed among the first and second node (column 8, lines 34-49).

As per dependent claim 55 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 54 and the same rejection is incorporated herein. Heddaya further discloses the method in which a node is assigned a share of the prefabrication workload based on a resource level of the node (column 8, lines 34-49).

As per dependent claim 56 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 54 and the same rejection is incorporated herein. Heddaya further discloses the system in which the node having the lower resource level is assigned a smaller share of the prefabrication workload (column 8, lines 34-49).

As per dependent claim 57 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 54 and the same rejection is incorporated herein.

Heddaya further discloses the method in which the first and second nodes are assigned work from the prefabricated workload in a coordinated manner (column 8, lines 34-49).

As per independent claim 63 Heddaya discloses obtaining one or more parameters that define how a page should be prefabricated (column 8, lines 34-49). Heddaya fails to disclose the method wherein the prefabrication is not in response to a request for the first page by a user. However, Smith discloses the method of prefabrication of a page wherein the prefabrication is not in response to a request for the first page by a user (Figures 3 and 4; column 5, line 56- column 6, line 18: Here, the pages to prefabricate are based upon pages that a user frequently visits. A page prefabrication is then scheduled for a specific time and the page is prefabricated without a user requesting the prefabricated page).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya's method of prefabrication with Smith's method of prefabrication, since it would have allowed a user to save server access time, conserve cache space, and reduce the risk of conflicting with the user's use of the telephone (Smith: column 5, lines 60-62).

Further, Heddaya and Smith fail to specifically disclose the method wherein the act of prefabrication the page comprises querying a database to obtain cached data, processing the data received from the database, and packaging the information associated with the data in a prescribed format. However, Wittgreffe discloses the method wherein the act of prefabrication the page comprises querying a database to

Art Unit: 2178

obtained cached data, processing the data received from the database, and packaging the information associated with the data in a prescribed format (column 2, lines 23-50).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya and Smith's method with Wittgreffe's method, since it would have allowed a user to more quickly access data.

As per dependent claim 65 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 63 and the same rejection is incorporated herein. Heddaya further discloses the prefabrication policy that is configured to identify pages to prefabricate (column 8, lines 34-49; column 3, lines 49-59).

As per dependent claim 67 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 63 and the same rejection is incorporated herein. Heddaya further discloses the prefabrication policy comprising a scheduling parameter (column 8, lines 34-49).

As per dependent claim 68 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 63 and the same rejection is incorporated herein. Heddaya further discloses the prefabrication policy comprising a refresh rate parameter (column 3, lines 49-62).

As per independent claim 70 Heddaya discloses a computer program product that include a medium usable by a processor having stored thereon a sequence of instructions which, when executed by said processor, causes said processor to execute a process for prefabricating an information page, the process comprising:

- Prefabricating a first page in accordance with a definable prefabrication policy to produce a first prefabricated page (column 7, lines 10-11)
- Receiving an information request (column 7, lines 18-24)
- Determining if the information request corresponds to the first page (column 7, lines 24-27)
- Providing the first prefabricated page if the information request corresponds to the first page (column 7, lines 24-27)
- Dynamically fabricating a second page if the information request corresponds to the second page (column 7, lines 42-45)

Heddaya fails to disclose the product wherein the prefabrication is not in response to a request for the first page by a user. However, Smith discloses the product of prefabrication of a page wherein the prefabrication is not in response to a request for the first page by a user (Figures 3 and 4; column 5, line 56- column 6, line 18: Here, the pages to prefabricate are based upon pages that a user frequently visits. A page prefabrication is then scheduled for a specific time and the page is prefabricated without a user requesting the prefabricated page).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya's product for prefabrication with Smith's product for prefabrication, since it would have allowed a user to save server access time, conserve cache space, and reduce the risk of conflicting with the user's use of the telephone (Smith: column 5, lines 60-62).

Further, Heddaya and Smith fail to specifically disclose the method wherein the act of prefabrication the page comprises querying a database to obtained cached data, processing the data received from the database, and packaging the information associated with the data in a prescribed format. However, Wittgreffe discloses the method wherein the act of prefabrication the page comprises querying a database to obtained cached data, processing the data received from the database, and packaging the information associated with the data in a prescribed format (column 2, lines 23-50).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya and Smith's method with Wittgreffe's method, since it would have allowed a user to more quickly access data.

As per independent claim 71 Heddaya disclose a computer program pr product that include a medium usable by a processor having stored thereon a sequence of instructions which, when executed by said processor, causes said processor to execute a process for prefabricating an information page, the process comprising:

- Prefabricating a first page on a first node to produce a first prefabricated page (column 7, lines 10-11)
- Storing the first prefabricated page (column 7, lines 10-11)
- Prefabricating a second page on a second node to produce a second prefabricated page (column 7, lines 10-11; column 6, lines 7-9)
- Storing the second prefabricated page (column 7, lines 10-11; column 6, lines 7-9)
- Receiving an information request (column 7, lines 18-24)

- Providing the first prefabricated page if the information request corresponds to the first page (column 7, lines 24-27)
- Providing the second prefabricated page if the information request corresponds to the second page (column 7, lines 24-27; column 6, lines 6-9)

Heddaya fails to disclose the product wherein the prefabrication is not in response to a request for the first page by a user. However, Smith discloses the product of prefabrication of a page wherein the prefabrication is not in response to a request for the first page by a user (Figures 3 and 4; column 5, line 56- column 6, line 18: Here, the pages to prefabricate are based upon pages that a user frequently visits. A page prefabrication is then scheduled for a specific time and the page is prefabricated without a user requesting the prefabricated page).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya's product for prefabrication with Smith's product for prefabrication, since it would have allowed a user to save server access time, conserve cache space, and reduce the risk of conflicting with the user's use of the telephone (Smith: column 5, lines 60-62).

Further, Heddaya and Smith fail to specifically disclose the method wherein the act of prefabrication the page comprises querying a database to obtained cached data, processing the data received from the database, and packaging the information associated with the data in a prescribed format. However, Wittgreffe discloses the method wherein the act of prefabrication the page comprises querying a database to

Art Unit: 2178

obtained cached data, processing the data received from the database, and packaging the information associated with the data in a prescribed format (column 2, lines 23-50).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya and Smith's method with Wittgreffe's method, since it would have allowed a user to more quickly access data.

As per dependent claim 72, Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 70, and the same rejection is incorporated herein. The applicant further discloses the limitations similar to those in claim 2. Claim 72 is similarly rejected under Heddaya and Smith.

As per dependent claim 75, Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 70, and the same rejection is incorporated herein. The applicant further discloses the limitations similar to those in claim 7. Claim 75 is similarly rejected under Heddaya, Smith, and Wittgreffe.

As per dependent claim 77, Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 70, and the same rejection is incorporated herein. The applicant further discloses the limitations similar to those in claim 10. Claim 77 is similarly rejected under Heddaya, Smith, and Wittgreffe.

As per dependent claim 78, Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 70, and the same rejection is incorporated herein. The applicant further discloses the limitations similar to those in claim 15. Claim 78 is similarly rejected under Heddaya, Smith, and Wittgreffe.

As per dependent claim 80, Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 70, and the same rejection is incorporated herein. The applicant further discloses the limitations similar to those in claim 21. Claim 80 is similarly rejected under Heddaya, Smith, and Wittgreffe.

As per dependent claim 81, Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 70, and the same rejection is incorporated herein. The applicant further discloses the limitations similar to those in claim 22. Claim 81 is similarly rejected under Heddaya, Smith, and Wittgreffe.

As per dependent claim 82, Heddaya, Smith, and Wittgreffe disclose the limitations similar to those in claim 70, and the same rejection is incorporated herein. Smith further discloses the prefabrication is performed in response to a request initiated by a software, a hardware, or a combination of both (column 5, line 35- column 6, line 8: Here, the system (a combination of hardware and software) initiates the request for content depending upon a users previous activity).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya, Smith, and Wittgreffe's method of prefabrication with Smith's method of prefabrication, since it would have allowed a user to save server access time, conserve cache space, and reduce the risk of conflicting with the user's use of the telephone (Smith: column 5, lines 60-62).

As per dependent claim 83, Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 71, and the same rejection is incorporated herein.

The applicant further discloses the limitations similar to those in claim 41. Claim 83 is similarly rejected under Heddaya, Smith, and Wittgreffe.

As per dependent claim 84, Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 71, and the same rejection is incorporated herein. The applicant further discloses the limitations similar to those in claim 51. Claim 84 is similarly rejected under Heddaya, Smith, and Wittgreffe.

As per dependent claim 85, Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 71, and the same rejection is incorporated herein. The applicant further discloses the limitations similar to those in claim 52. Claim 85 is similarly rejected under Heddaya, Smith, and Wittgreffe.

As per dependent claim 86, Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 71, and the same rejection is incorporated herein. The applicant further discloses the limitations similar to those in claim 42. Claim 86 is similarly rejected under Heddaya, Smith, and Wittgreffe.

As per dependent claim 87, Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 71, and the same rejection is incorporated herein. The applicant further discloses the limitations similar to those in claim 82. Claim 87 is similarly rejected under Heddaya, Smith, and Wittgreffe.

As per dependent claim 88, Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 1, and the same rejection is incorporated herein. The applicant further discloses the limitations similar to those in claim 82. Claim 88 is similarly rejected under Heddaya, Smith, and Wittgreffe.

As per dependent claim 89, Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 49, and the same rejection is incorporated herein. The applicant further discloses the limitations similar to those in claim 82. Claim 89 is similarly rejected under Heddaya, Smith, and Wittgreffe.

As per dependent claim 91, Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 63, and the same rejection is incorporated herein. The applicant further discloses the limitations similar to those in claim 82. Claim 91 is similarly rejected under Heddaya, Smith, and Wittgreffe.

15. Claims 4-5, 33, and 73 are rejected under 35 U.S.C. 103(a) as being unpatentable over Heddaya, Smith, and Wittgreffe and further in view of Eichstaedt et al. (U.S. 6,182,085).

As per dependent claim 4, Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 1, and the same rejection is incorporated herein. Heddaya also discloses determining if additional pages should be prefabricated (column 8, lines 40-43) and prefabrication of pages (column 7, lines 10-11). However, Heddaya and Smith does not disclose crawling a page. However, Eichstaedt discloses crawling a page (Figure 3; column 5, lines 13-20).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya, Smith, and Wittgreffe's method for determining which pages to prefabricate and Heddaya's prefabrication method with Eichstaedt's method of crawling pages since it would have allowed for pages linked to

the first prefabricated page to be prefabricated so that a user would have been able to access pages more rapidly.

As per dependent claim 5, Heddaya, Smith, Wittgreffe, and Eichstaedt disclose the limitation similar to those in claim 4 and the same rejection is incorporated herein. Heddaya also discloses the method in which a first page is prefabricated (column 7, lines 10-11). Although Heddaya is silent on a start page, it is well known that a start page is a type of page and is inherently included in Heddaya's method of page prefabrication.

As per dependent claim 33, Heddaya, Smith, and Wittgreffe disclose the limitations similar to those in claim 23 and the same rejection is incorporated herein. Heddaya fails to disclose the system in which the prefabricator comprises a module to crawl the first prefabricated page for additional pages to prefabricate. However, Eichstaedt discloses crawling a page (Figure 3; column 5, lines 13-20).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya, Smith, and Wittgreffe's system to prefabricate pages with Eichstaedt's method of crawling pages since it would have allowed for pages linked to the first prefabricated page to be prefabricated so that a user would have been able to access pages more rapidly.

As per dependent claim 72, Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 70, and the same rejection is incorporated herein. The applicant further discloses the limitations similar to those in claim 4. Claim 72 is similarly rejected under Heddaya, Smith, Wittgreffe, and Eichstaedt.

16. Claims 6, 9, 19, 28, 36, 58-62, 64, 74, 76, and 90 are rejected under 35 U.S.C. 103(a) as being unpatentable over Heddaya, Smith, and Wittgreffe and further in view of Reiche (U.S. 6,092,192).

As per dependent claim 6 Heddaya, Smith, and Wittgreffe disclose the limitation similar to those in claim 1, and the same rejection is incorporated herein. Heddaya also discloses packaging information into the first prefabricated page (column 3, lines 49-51). Heddaya fails to disclose the method further comprising querying a database for information and processing the information. However, Reiche discloses querying a database for information, processing the information, and using the processed information for pages (column 6, lines 26-36).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya, Smith, and Wittgreffe's prefabrication method with Reiche's method of querying a database, processing information, and using the processed information for pages, since it would have allowed for prefabricated processed information to be quickly accessible.

As per dependent claim 9 Heddaya, Smith, and Wittgreffe disclose the limitations similar to those in claim 1, and the same rejection is incorporated herein. Heddaya fails to disclose a definable prefabrication policy that applies to a specific user or class of users. However, Reiche discloses a policy of allowing a specific user or a class of users to see documents based upon user verification (column 6, lines 26-36).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya, Smith, and Copland's prefabrication policy with Reiche's policy of allowing a specific user or group of users access to certain document, since it would have allowed for user specific information to be displayed only to authorized users.

As per dependent claim 28 Heddaya, Smith, and Wittgreffe disclose the limitations similar to those in claim 25, and the same rejection is incorporated herein. Heddaya fails to disclose a user access parameter. However, Reiche discloses a policy of allowing a specific user or a class of users to see documents based upon user verification (column 6, lines 26-36).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya, Smith, and Wittgreffe's policy of prioritizing a list of pages to prefabricate with Reiche's policy of allowing a specific user or group of users access to certain document, since it would have allowed for pages to be prefabricated in order to ensure that users with certain permissions received pages more quickly than other users.

As per dependent claim 36 Heddaya, Smith, and Wittgreffe disclose the limitations similar to those in claim 23, and the same rejection is incorporated herein. Heddaya fails to disclose the system in which the computer application comprises a database application. However, Reiche discloses a database application (column 5, lines 32-42).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya, Smith, and Wittgreffe's system for prefabricating information with Reiche's use of a database application, since it would have allowed for information stored in the database to be prefabricated and available for efficient access.

As per independent claim 58 Heddaya and Smith disclose a method for prefabricating an information page comprising:

- Prefabricating a first page to produce a first prefabricated page (column 7, lines 10-11)
- Receiving an information request from a user (column 7, lines 18-24)
- Determining if the information request corresponds to the first page (column 7, lines 24-27)
- Providing the first prefabricated page if the information request corresponds to the first page (column 7, lines 24-27)
- Dynamically fabricating a second page if the information request corresponds to the second page (column 7, lines 42-45)
- Prefabrication wherein the prefabrication is not in response to a request for the first page by a user (Smith: Figures 3 and 4; column 5, line 56- column 6, line 18)

Heddaya and Smith fail to disclose the use of a session identifier when receiving an information request from a user and Heddaya also fails to disclose providing the first prefabricated page with the session identifier if the information request corresponds to the first page. However, Reiche discloses the use of "receiving an information request

Art Unit: 2178

from a user having a session identifier" (column 4, lines 54-65). Reiche further discloses providing a page with the session identifier if the request is accepted (column 5, lines 1-4; column 6, lines 8-10 and lines 21-36).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya and Smith's method of prefabrication of information with Reiche's method of user verification and data integrity, since it would have allowed a server to verify that unauthorized users were not able to obtain sensitive information from a prefabricated document.

Further, Heddaya and Smith fail to specifically disclose the method wherein the act of prefabrication the page comprises querying a database to obtained cached data, processing the data received from the database, and packaging the information associated with the data in a prescribed format. However, Wittgreffe discloses the method wherein the act of prefabrication the page comprises querying a database to obtained cached data, processing the data received from the database, and packaging the information associated with the data in a prescribed format (column 2, lines 23-50).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya and Smith's method with Wittgreffe's method, since it would have allowed a user to more quickly access data.

As per dependent claim 59, Heddaya, Smith, Wittgreffe, and Reiche disclose the limitations similar to those in claim 58. Heddaya fails to disclose verifying the validity of a session identifier. However, Reiche discloses verification of a session identifier (column 5, lines 32-42).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya, Smith, Wittgreffe, and Reiche's method of prefabrication of information with Reiche's method of verification of a session identifier, since it would have allowed a server to verify that unauthorized users were not able to obtain sensitive information from a prefabricated document.

As per dependent claim 60, Heddaya, Smith, Wittgreffe, and Reiche disclose the limitations similar to those in claim 59. Heddaya discloses a message passing between network nodes (column 14, lines 4-7). Heddaya fails to disclose verifying the validity of the session identifier to one or more nodes. However, Reiche discloses verification of a session identifier (column 5, lines 32-42).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya, Smith, Wittgreffe, and Reiche's method of message passing between network nodes with Reiche's method of verification of session identifiers, since it would have allowed all nodes on a network to know that document requests from a specified session were valid.

As per dependent claim 61 Heddaya, Smith, Wittgreffe, and Reiche disclose the limitations similar to those in claim 58. Heddaya discloses prefabrication of a first page. Heddaya does not disclose the first page as a URL parameter. However, Reiche discloses a page as a URL parameter (column 5, lines 6-10).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya, Smith, Wittgreffe, and Reiche's method of page prefabrication to Reiche's method of using a URL parameter in order to

verify a user, since it would have allowed for a redirection to be made either to or from a log-in server and thus allowing for user identification.

As per dependent claim 62 Heddaya, Smith, Wittgreffe, and Reiche disclose the limitations similar to those in claim 58. Heddaya discloses prefabrication of a first page. Heddaya does not disclose the first page as a cookie value. However, Reiche discloses using a cookie value (column 6, lines 5-10).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya, Smith, Wittgreffe, and Reiche's method of page prefabrication to Reiche's method of using a cookie value in order to verify a user, since it would have allowed for user to validate their identity a single time with relevant user identification stored in a cookie.

As per dependent claim 64 Heddaya, Smith, Wittgreffe, and Reiche disclose the limitations similar to those in claim 63, and the same rejection is incorporated herein. Heddaya fails to disclose a method that applies to a specific user or class of users. However, Reiche discloses a policy of allowing a specific user or a class of users to see documents based upon user verification (column 6, lines 26-36).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya, Smith, Wittgreffe, and Reiche's prefabrication policy with Reiche's policy of allowing a specific user or group of users access to certain document, since it would have allowed for user specific information to be displayed only to authorized users.

As per dependent claim 74, Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 70, and the same rejection is incorporated herein. The applicant further discloses the limitations similar to those in claim 6. Claim 74 is similarly rejected under Heddaya, Smith, Wittgreffe and Reiche.

As per dependent claim 76, Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 70, and the same rejection is incorporated herein. The applicant further discloses the limitations similar to those in claim 9. Claim 76 is similarly rejected under Heddaya, Smith, Wittgreffe and Reiche.

As per dependent claim 90, Heddaya, Smith, Wittgreffe discloses the limitations similar to those in claim 58, and the same rejection is incorporated herein. The applicant further discloses the limitations similar to those in claim 82. Claim 90 is similarly rejected under Heddaya, Smith, Wittgreffe and Reiche.

17. Claims 12 and 66 are rejected under 35 U.S.C. 103(a) as being unpatentable over Heddaya, Smith, and Wittgreffe in further view of Lapstun et al. (U.S. 6,549,935).

As per dependent claim 12 Heddaya, Smith, and Wittgreffe disclose the limitation similar to those in claim 1, and the same rejection is incorporated herein. Heddaya fails to disclose a policy comprising an application identifier. However, Lapstun discloses an application identifier (column 17, lines 55-58).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya, Smith, and Wittgreffe's method with

Lapstun's application identifier, since it would have allowed applications to be referenced by pages and other applications.

As per dependent claim 66 Heddaya, Smith, and Wittgreffe disclose the limitation similar to those in claim 63, and the same rejection is incorporated herein. Heddaya fails to disclose a policy comprising an application for which a page should be prefabricated. However, Lapstun discloses an application identifier to identify applications (column 17, lines 55-58).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya, Smith, and Wittgreffe's policy with Lapstun's application identifier, since it would have allowed applications to be referenced by pages and other applications.

18. Claims 16-17, 20, 69, and 79 are rejected under 35 U.S.C. 103(a) as being unpatentable over Heddaya, Smith, and Wittgreffe in further view of Birnbaum (U.S. 5,797,128).

As per dependent claim 16 Heddaya, Smith, and Wittgreffe disclose the limitations similar to those in claim 1, and the same rejection is incorporated herein. Heddaya fails to disclose a definable prefabrication policy organized as a hierarchy of policies. However, Birnbaum discloses a system with a hierarchy of policies (column 4, lines 27-32).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya, Smith, and Wittgreffe's prefabrication

Art Unit: 2178

policy with Birnbaum's hierarchy of policies, since it would have allowed for policy groups containing parents and children (Birnbaum: column 5, lines 60-63).

As per dependent claim 17 Heddaya, Smith, Wittgreffe, and Birnbaum disclose the limitations similar to those in claim 16, and the same rejection is incorporated herein. Birnbaum also discloses the policy comprising a system policy (column 4, lines 27-32).

As per dependent claim 20 Heddaya, Smith, Wittgreffe and Birnbaum disclose the limitations similar to those in claim 16, and the same rejection is incorporated herein. Heddaya also discloses the policy comprising a transient policy (column 8, lines 29-49).

As per dependent claim 69 Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 63, and the same rejection is incorporated herein. Heddaya fails to disclose parameters organized as a hierarchy of policies categories. However, Birnbaum discloses a system with a hierarchy of policies (column 4, lines 27-32).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya, Smith, and Wittgreffe's prefabrication policy with Birnbaum's hierarchy of policies, since it would have allowed for policy groups containing parents and children (Birnbaum: column 5, lines 60-63).

As per dependent claim 79, Heddaya, Smith, and Wittgreffe discloses the limitations similar to those in claim 70, and the same rejection is incorporated herein.

The applicant further discloses the limitations similar to those in claim 16. Claim 79 is similarly rejected under Heddaya, Smith, Wittgreffe and Birnbaum.

19. Claim 18 is rejected under 35 U.S.C. 103(a) as being unpatentable over Heddaya, Smith, Wittgreffe and Birnbaum in further view of Lapstun et al. (U.S. 6,549,935).

As per dependent claim 18 Heddaya, Smith, Wittgreffe, and Birnbaum disclose the limitation similar to those in claim 16, and the same rejection is incorporated herein. Heddaya fails to disclose a policy comprising an application identifier. However, Lapstun discloses an application identifier (column 17, lines 55-58).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya, Smith, Wittgreffe and Birnbaum's method with Lapstun's application identifier, since it would have allowed applications to be referenced by pages and other applications.

20. Claim 19 is rejected under 35 U.S.C. 103(a) as being unpatentable over Heddaya, Smith, Wittgreffe, and Birnbaum in further view of Reiche.

As per dependent claim 19 Heddaya, Smith, Wittgreffe, and Birnbaum disclose the limitations similar to those in claim 16, and the same rejection is incorporated herein. Heddaya fails to disclose a definable prefabrication policy that applies to a specific user or class of users. However, Reiche discloses a policy of allowing a

Art Unit: 2178

specific user or a class of users to see documents based upon user verification (column 6, lines 26-36).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya, Smith, Wittgreffe, and Birnbaum's prefabrication policy with Reiche's policy of allowing a specific user or group of users access to certain document, since it would have allowed for user specific information to be displayed only to authorized users.

21. Claim 29 is rejected under 35 U.S.C. 103(a) as being unpatentable over Heddaya, Smith, and Wittgreffe in further view of Genty et al. (U.S. 2002/0078165).

As per dependent claim 29 Heddaya, Smith, and Wittgreffe disclose the limitations similar to those in claim 25, and the same rejection is incorporated herein. Heddaya fails to disclose the system in which the module prioritizes the list of pages based upon a page depth parameter. Genty discloses generating pages based upon page depth (page 1, paragraph 0009).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Heddaya, Smith, and Wittgreffe's system to prioritize pages to generate with Genty's system of pre-fetching pages at various depths, since it would have allowed for pages commonly visited by a user to be fetched and stored for more rapid access (Genty: page 1, paragraph 0009).

Response to Arguments

22. Applicant's arguments filed 1 December 2006 have been fully considered but they are not persuasive.

With respect to the applicant's remarks with respect to the declaration under 37 CFR 1.131 (pages 16-21), the examiner points out that MPEP 715.07 states:

The affidavit or declaration and exhibits must clearly explain which facts or data applicant is relying on to show completion of his or her invention prior to the particular date.

Therefore, the portions cited by the applicant in response to the defective declaration are inappropriate in the Remarks, and would be considered by the examiner if placed into an amended declaration under 37 CFR 1.131.

With respect to Copeland, the applicant argues that Copeland teaches limitations contrary to the claimed limitations (pages 21-22). The examiner respectfully disagrees. Copeland discloses querying a database to obtain cached data (paragraphs 0038-0041). Here, a CacheEntry object is created for each cacheable version of web data (paragraph 0040). Further, databases are able to store this cached object and retrieve it via a query (paragraph 0038). Additionally, this obtained data is processed and packaged in the creation and storage of the data into the created CacheEntry (paragraphs 0038-0041). Although, Copeland may disclose caching either a command, HTML code, or a fully rendered page, either option is stored in the created CacheEntry.

The applicant further argues that Wittgreffe fails to disclose, teach, or suggest the claimed limitations of claim 1 (pages 22-23). The examiner respectfully disagrees. Wittgreffe discloses searching a cached webpage (Figure 2; column 5, line 1-13: Here, prior to searching the webpage on the network, the webpage is cached, and the cached version is searched). Further, the query results are then processed and packaged with the obtained data (column 2, lines 25-50).

Conclusion

23. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kyle R. Stork whose telephone number is (571) 272-4130. The examiner can normally be reached on Monday-Friday (8:00-4:30).

Art Unit: 2178

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stephen Hong can be reached on (571) 272-4124. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>.
